

Innovation is our mission

Recipe set up through algorithms employing AI, Data Analysis and Self-Learning.

For the first time ever Artificial Intelligence is brought to the converting industry to power machine set up through Data Analysis and Self Learning protocols.

Upon input of the specs of a coating/laminating job system will return a suggested machine setting list.

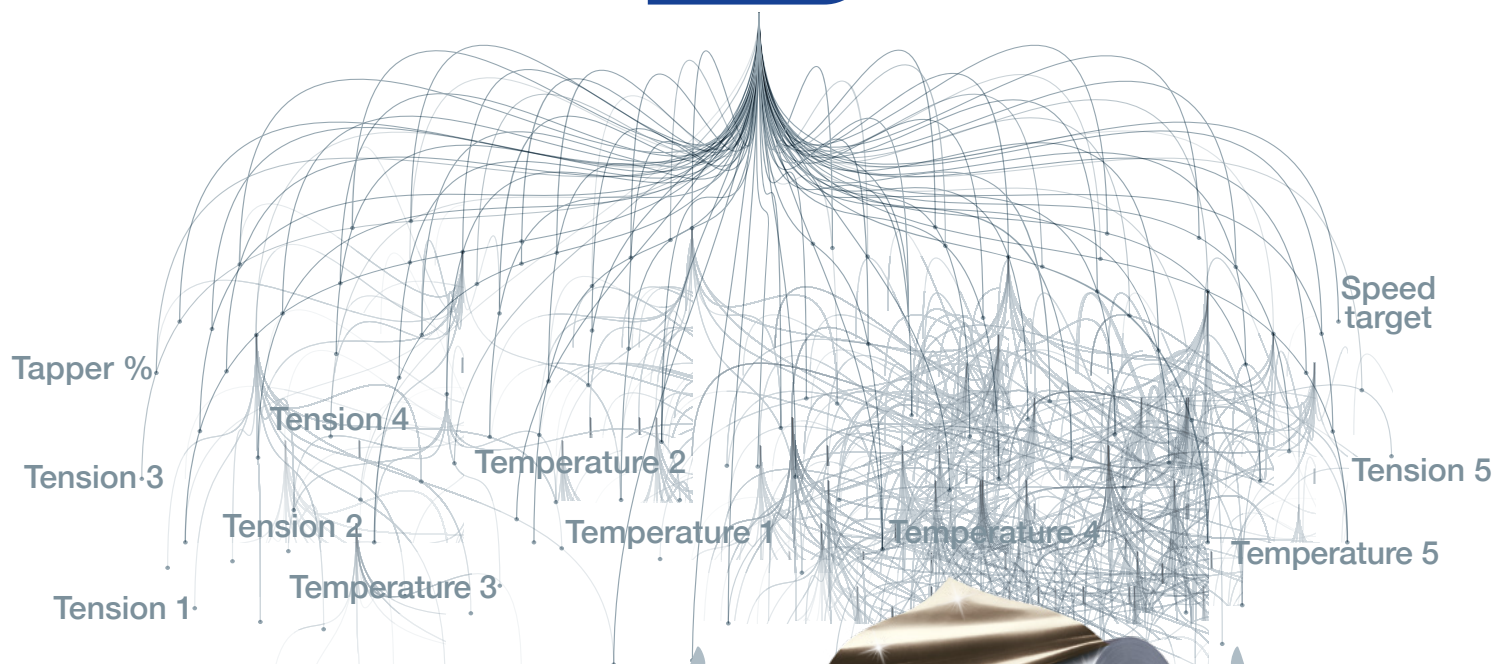

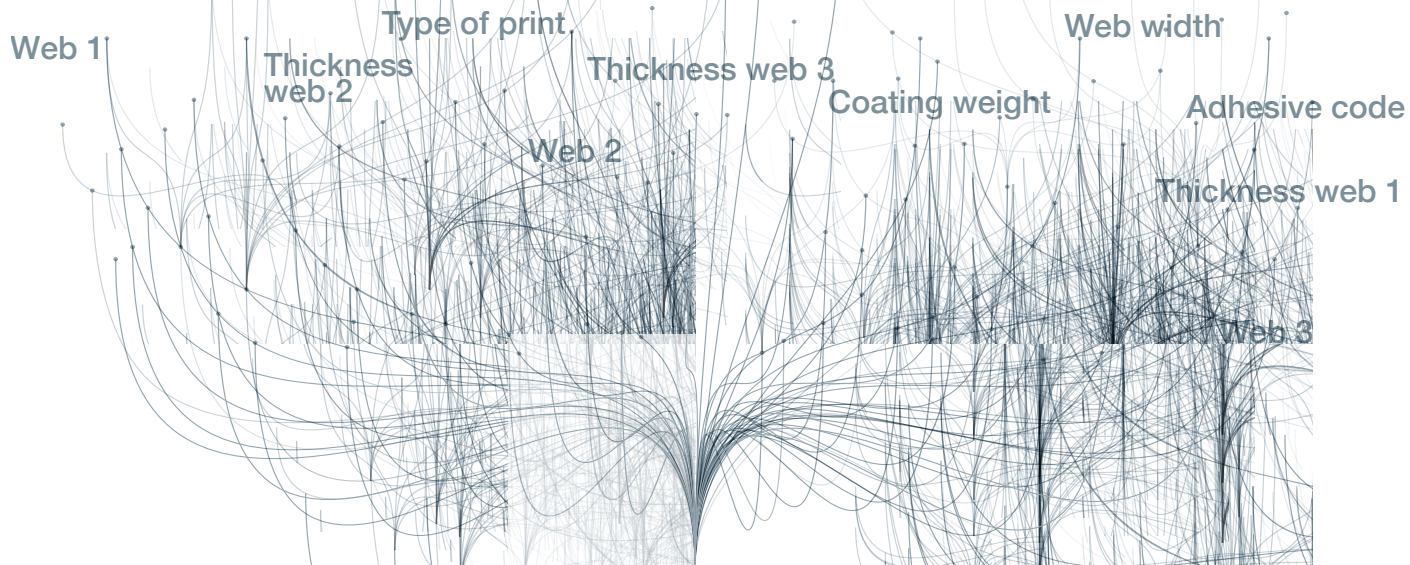

At operator approval settings can be sent to full pre-setting for transfer to field devices.

Machine will be quickly ready to run with unprecedented accuracy.

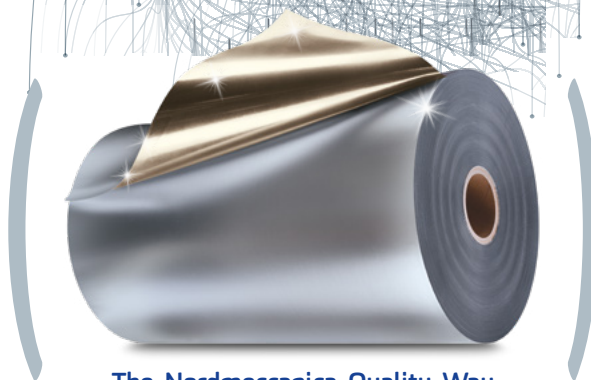

Machine data base will grow with use improving and customizing performances with time.

System will be set to work in Local mode or upon upgrade to NM-Cloud in connection with other NM machines within an organization.

Invented here, perfected here !
